(a) heterogeneous fleet: cut layers 2, 2, 5, 9
$c_1 = 2$
$c_2 = 2$
$c_3 = 5$
$c_4 = 9$
ONE merged call
layers 9–27, all 4 sessions
layer 0
$d = 9$
28
(b) homogeneous fleet: $d = c_i$, prefixes vanish
$c_1 = 2$
$c_2 = 2$
$c_3 = 2$
$c_4 = 2$
ONE merged call
layers 2–27, all 4 sessions
$d = 2$
28
run on the edge device
private prefix (merged only with same-cut peers)
shared tail: one batched call carrying every session
